

# DEMON analyse

Intelligent video analysis for digital video including Ovation AfterBurner DVDs

Product Information Sheet

## Effective and flexible digital video analysis

With Ovation AfterBurners and other digital video recorders becoming more popular as the video recording solutions for surveillance operations and CCTV systems, **DEMON analyse** (Formerly Video Inspector) analyses video footage directly from disk and logs all events in the sequences. This dramatically reduces the man hours you have to spend manually analysing the video footage.

Key information – such as object size and position – is stored in a searchable database linked to the video file. **DEMON analyse** finds the pre-defined events of interest and presents them on a timeline. You can change the search criteria and the system will instantaneously update the timeline with the new events of interest, without having to re-analyse the video footage. It allows you to selectively navigate through footage so events of interest are easily located and viewed.

The system automatically compensates for varying frame rates and allows for faster than real-time analysis. Variable speed playback, forward and rewind facilities provide for ease of operation. Not only does this reduce costs, it increases the accuracy of the video analysis.

“Reduce the cost and increase the accuracy of digital video analysis”

### Key features

- Resource, time and money saving
- Increase accuracy and effectiveness of video analysis
- Automatic log and timeline for all recorded events
- Events selected based on position, size, speed
- Instantaneous re-analysis for alternative events
- Automatic compensation for varying frame rates

### Minimum requirements

- Intel Pentium IVTM 1.7GHz or faster
- 128MB or RAM
- CD-ROM or DVD drive
- 1024 x 768 (SVGA Display) with high-colour (24bit or higher colour depth)
- 50MB Free Hard Drive Space
- Windows XPTM or better
- DirectX 9 or better
- Standard 2 button mouse (Wheel Mouse Recommended for navigating time line)
