DVD-Explorer is a unique software program specially designed for viewing DVDs recorded by AfterBurner, the leading time-lapse DVD recorder used by law enforcers for evidence gathering.

Standard DVD players are designed for showing video clips and movies and do not allow for easy navigation of recorded video. DVD-Explorer contains a number of key features that allow for quick review of video-DVDs, which can help save valuable time in reviewing evidence.

The software is easy to install on a standard PC or laptop and requires minimal training to use.

Fast navigation:

Finding exactly what you want on standard DVD players is not easy and can be very time-consuming. DVD-Explorer has easy to use control buttons and sliders to quickly navigate around a DVD. Furthermore, DVD-Explorer reads AfterBurner specific data, providing even faster DVD navigation, corrected time-lapse playback and jump to alarm capability.

Goto specified date and time:

With DVD-Explorer it is possible to jump to a specific date and time on the DVD. This is ideal when trying to locate events noted by intelligence officers.

View each frame:

One of the key features of DVD-Explorer is the ability to step forwards or backwards through the recording, frame by frame. This ensures that vital evidence can be easily found.

Picture gallery:

Once a frame of interest has been located, it can be bookmarked, along with a text comment, to a picture gallery. The gallery provides a summary of the points of interest on the disk, which can be saved for later review or exported to another PC.

Frame capture & save:

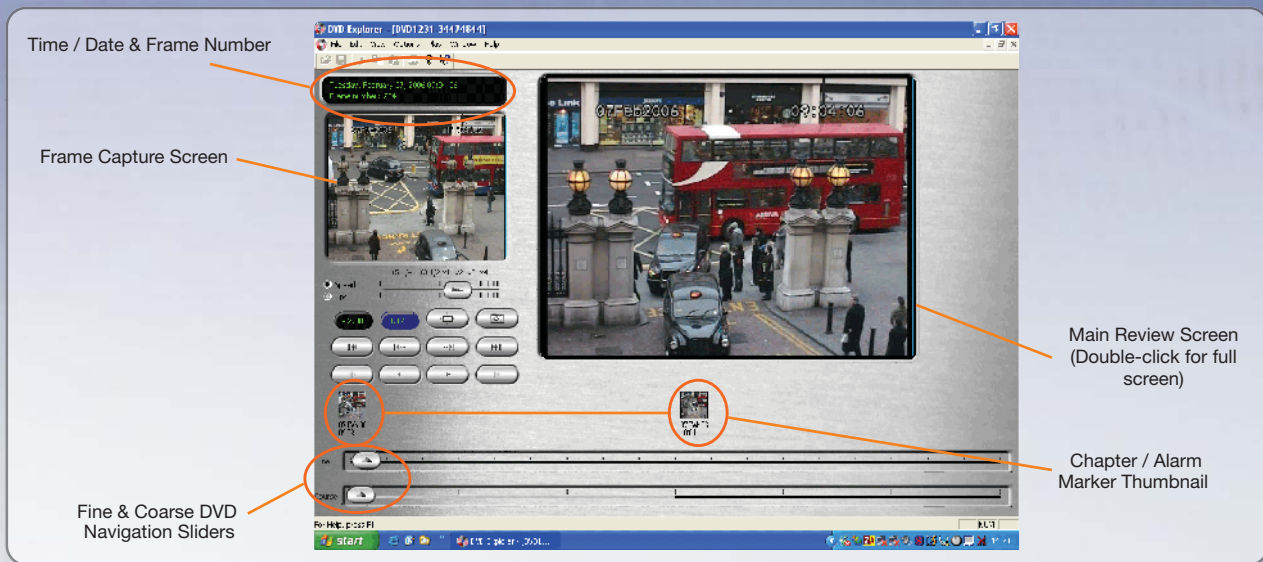

To aid archiving, gallery frames can be exported as JPEG or BMP files.

Jog and shuttle control:

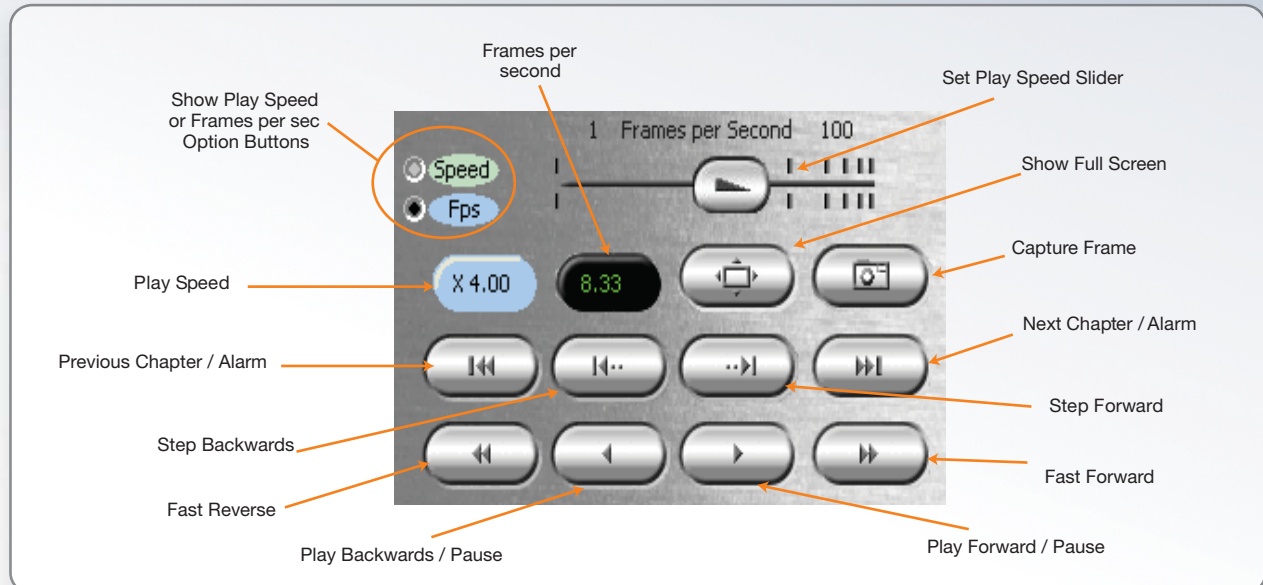

For ease of playback, DVD-Explorer can be interfaced to an external jog and shuttle pad (Contour ShuttlePro²). This provides simple and effective control of playback functions including step-by-step forwards and backwards.
